

Mi Marine

With the MiApp you always have the current location of your vessel(s) in view

With the Mi50 Marine and the beacon series, Moving Intelligence offers various innovative water sport solutions for vessel security, tracking systems and control of appliances on your boat. Then there is the logbook, shipping route registration and automatic (push) notifications as soon as your vessel or other object leaves and/or arrives at an area.

Mi50 Marine

The Mi50 Marine is a high quality vessel tracking system with which you can track and secure your vessel real-time.

You can track the location of your vessel(s) because the Mi50 Marine is connected to the MiApp and the online Moving Intelligence platform. The routes sailed by you or your boat captain are automatically registered. You then know where your boat has been, and you can prevent and demonstrate illicit use.

With the geofence service you receive a (push) notification as soon as your vessel leaves or arrives at a certain area.

The Mi50 also allows use of the MiApp to switch various appliances in your vessel on or off such as a heater or refrigerator.

Simplicity and user-friendly

The Mi50 Marine and Mi beacon systems are very small and simple to assemble. After installation and activation the systems are immediately visible on the Moving Intelligence platform and in the MiApp. In the online Moving Intelligence platform you can

MiApp and online platform

With the MiApp and the online Moving Intelligence platform you can see the current location of all your objects, always and everywhere.

With the Mi50 Marine all shipping routes are displayed in real-time and you can view, save and print different reports.

The free MiApp is available for iOS and Android.

Mi beacons

The Mi7, Mi8 and the Mig beacons are GPS/GSM track and trace systems with which you can secure and trace your vessel(s) and other objects, also after theft.

The beacons are very small and work on an internal battery. This means they can be fitted simply, securely and invisibly in any vessel and object.

After a theft alarm the beacons transmit a signal every hour by GSM or GPS (Mi8/Mig) and every second by radio. Each object can then be accurately traced.

Just as with the Mi50 Marine, you can use geofencing to receive (push) notifications as soon as your vessel or object leaves or arrives at a certain area.

activate the required services and choose the duration yourself. The services are immediately active after confirmation with coverage across the whole of Europe.

Product specifications

Advantages

- Simple installation (Mi50 by specialist fitter)
- Very small format
- Easy to use
- Automatic notification with movement
- Own theft tracing service
- GPS coverage across Europe (Mi7/Mi9/Mi50)
- Watertight (Mi8/Mi9 IP65 and Mi50 optional)
- Connection to Emergency Dispatch Centre
- Current location on the platform and in the app
- Managed with MiApp (iOS and Android)

Moving Intelligence

We bring your world on the move under control. This is done with hardware that is invisibly built in and with software that makes information visible. We help people manage all things moving: from car to scooter, from trailer to container, from boat to work equipment. We do this for everyone: multinational or retailer, fleet manager or proud owner of a vintage car.
