

Mi-7-8-9

The Moving Intelligence beacons, an inexpensive and effective solution to prevent the theft of your possessions

Thefts of cars and other mobile objects have been on the rise again in recent years. That is why many people are deciding to securely protect their possessions against theft. The range of security systems for cars, equipment, boats, tractors, etc. is enormous. Unfortunately this does not appear to be adequate. Thieves are becoming increasingly professional and are, for example, able to use computer programs to hack or disable expensive electronic security systems. And that is why we have the Moving Intelligence beacons.

The tracking devices for all your mobile objects

The beacons have coverage across the whole of Europe and are each provided with unique functionality. With a tracking device you make sure that your means of transport can always be found, for example after theft. The small format and internal battery allow them to be fitted invisibly anywhere in a means of transport. They transmit signals by GSM, radio frequency and the Mi7 and Mi9 also using GPS. This means they always work everywhere, across the whole of Europe.

Operation of the beacon series

After theft and a notification to the tracing service the beacon send a signal every hour through the GSM/GPS network and every second by radio. These signals are used to accurately trace and recover the stolen means of transport.

Mig is SCM-certified for tracing units

The Mig is a Kiwa SCM-approved Tracing system (TV01). An approved tracing unit is a post-theft system that ensures that a vehicle will be found within 24 hours in the Netherlands in line with the standard. This is why insurers mention a tracking device from this security class in their policy conditions. With the Mig you are then guaranteed the best security in this field.

Simplicity and user-friendly

The beacons have a very small format. They can be professionally and invisibly installed in the means of transport by your dealer. With the internal battery the system has no influence on the vehicle's electronic system. Another advantage of the beacon is that it works stand alone and without wiring. Then the system cannot be sabotaged. We often see that our end users, certainly those with cars from the higher segment, are also having our beacons installed besides the obligatory

security system. They then have the ultimate in security. Thieves have great difficulty in stealing the car, and should they nevertheless succeed, the beacon then does its job. In short, our beacon is a must for any means of transport! After purchase you receive an activation code. You use this code to add your means of transport to your Moving Intelligence account. In the online shop you can activate the services while also deciding the duration yourself.

The services are immediately activated with coverage across the whole of Europe at the same rate. On the Moving Intelligence platform you manage the administrative information, the means of transport and the authorisation structure yourself. For the Emergency Dispatch Centre you can yourself create the alarm contacts with the associated personal code.

Product specifications

The product specifications for each beacon are listed below. You can yourself determine which functionality you activate. The use of functionality can influence the working life of the battery. The battery will more quickly discharge if the movement sensor is continually on.

	Mi7	Mi8	Mi9
Min. working life (1 position a day)	3 years	6 years	8 years
Max. number of positions per 24 hours	1	3	3
Max. number of positions per 24 hours with no movement	1	3	3

Advantages

- Simple installation
- Easy to use
- Simple theft tracing
- Coverage across the whole of Europe
- Internal battery
- Very small format
- Wireless
- Connection to Emergency Dispatch Centre
- View of the current status of the beacons on the Moving Intelligence platform
- Managed with MiApp (iOS and Android)

Moving Intelligence

We bring your world on the move under control. This is done with hardware that is invisibly built in and with software that makes information visible. We help people manage all things moving: from car to scooter, from trailer to container, from boat to work equipment. We do this for everyone: multinational or retailer, fleet manager or proud owner of a vintage car.
