

Trip Logging

Trip Logging with Dutch quality mark? 100 per cent conclusive, reliable and tax authority-proof!

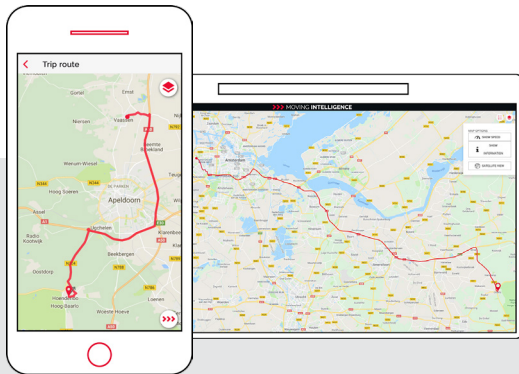

- ✓ Dutch quality mark for trip logging systems
- ✓ One system for trip logging, security and fleet management (Mi50)
- ✓ All information about every route can be seen online and in the app
- ✓ All relevant data required by tax authorities

Keeping mileage administration can be a time-consuming task. But it is, however, a necessity. This is for example to avoid fines from the tax authorities. It is also needed for declaring mileage driven for business purposes. So it is good to have reliable trip registration in place without any further concerns about it. With a press of the button you can read all relevant data for the tax authorities on the Moving Intelligence platform.

With the Mi40 and Mi50 you are assured of fully automatic trip logging. All information about each route is clear to see. Examples can include route information such as travelling time, distance, departure and visiting address, post code and house numbers, always real-time and up-to-date. All information about each route (business, private or unclassified) is visible in real-time on the online platform and in our app (MiApp).

Mi50: One system for security, trip logging and vehicle fleet management

This system can be used to secure, track and trace your vehicle live. It can also be used for trip logging and driving style analysis. In short, everything you need for carefree and safe driving. All information relevant for reporting to tax authorities can be easily accessed and available in reports. The details of the trips are shown in real-time on detailed maps.

Online platform & app

With the MiApp and the online Moving Intelligence platform you have one summary of all your vehicles, always and everywhere. All current information such as engine ignition on/off, current speed and driven distance are displayed on a detailed chart and in a table summary. Live tracking is active across the whole world. The MiApp is available for iOS and Android.

Simplicity and user-friendly

Both systems have a compact size, and are installed invisibly and tested professionally by your dealer or installation specialist. Obviously the systems have no influence on the vehicle's electronic systems. After installation you receive an activation code. This adds the vehicle to your account, and you activate the desired package. The chosen package is active immediately, throughout the whole of Europe, at the same rate. On the Moving Intelligence platform you manage the administrative details, the vehicle(s) and the authorisation structure.

MiClassify

When you as a business person also use your vehicle privately, it is handy if you have a summary of the kilometres driven for business and private purposes. It is necessary to know how many kilometres you have driven privately, even if your company car does not count for tax purposes. With the Mi40 and Mi50 you can use the MiApp to classify your routes.

The Mi50 can be extended with the MiClassify, a route selection switch that you can set to private or business.

MiReader

Knowing who has driven a certain car and when is always a challenge. The MiReader is your solution. Personal identification is possible with the Mi50. The MiReader registers each route and is directly linked to the vehicle driver.

With the MiReader you see the route information for the various drivers. This can be extended with for example driving style analysis per driver.

Trip logging quality mark

Our trip logging systems, the Mi40 and the Mi50, have the Dutch trip logging systems quality mark (Keurmerk RitRegistratieSystemen). Users of our trip logging systems can then be sure of 100 per cent conclusive, reliable and tax authority-proof trip registration. With this quality mark the correctness of your trip administration for the tax authorities is guaranteed and you can count on secure use of privacy and fraud-sensitive data.

ADVANTAGES

- Quality mark for trip logging systems (Dutch)
- Fully in conformity with tax administration requirements
- One system for security and fleet management (Mi50)
- Back-up battery
- Simple to combine with other Moving Intelligence products (Mi50)
- Managed with MiApp (iOS and Android)

MOVING INTELLIGENCE

We bring your world on the move under control. This is done with hardware that is invisibly built-in and with software that makes information visible. We help people manage all things moving: from car to scooter, from trailer to container, from boat to work equipment. We do this for everyone: multinational or retailer, fleet manager or proud owner of a vintage car.
